Coronavirus

What is Coronavirus

Coronaviruses (CoV) are a large family of viruses that cause illnesses ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). A novel coronavirus (COVID-19) is a new strain that has not been previously identified in humans. ¹

How are Certain Coronavirus Transmitted?

Animal to person and person to person via infected air droplets. ²

How are the Coronavirus and Influenza different?

Understanding the Disease

Far more studies have been performed on the Influenza virus to study its type, transmission, and severity. However, the presence of COVID-19 is new and requires further research and clinical studies.

Vaccines

Available for Influenza but unavailable for COVID-19 at the moment.

Signs and Symptoms

Did you know?

In severe cases, an infection can cause pneumonia, severe acute respiratory syndrome, kidney failure, and even death. Symptoms may appear in as few as two days or as long as 14 days after exposure.
