RSA SecurID® Access —
Cyber Catalyst Designation

RSA SecurID® Access has been designated a 2019 Cyber Catalyst solution. It is a risk-based multi-factor authentication solution that provides identity assurance to help businesses protect their most valuable assets. It enables organizations of all sizes to address the security challenges of delivering access to dynamic user populations across complex environments, securing multiple points of access.

RSA SecurID Access enables businesses to empower employees, partners and contractors to do more without compromising security or convenience. Embracing the security challenges of today’s blended cloud and on-premise environments, bring your own device, and mobile, RSA SecurID Access ensures that users have timely and secure access to the applications they need—from any device, anywhere—with a modern, convenient user experience.

It offers the broadest range of authentication methods, including device biometrics (fingerprint and face verification), push notification, one-time passcode via mobile app, traditional hardware and soft tokens, SMS, or phone as well as support for FIDO authenticators, empowering organizations to safeguard applications and resources.

Powered by machine learning, RSA SecurID Access takes a risk-based approach to authentication, leveraging business context, identity insights and threat intelligence to mitigate compromised identities through identity assurance. With RSA SecurID Access, businesses can grant secure and seamless access to any application on-premises or in the cloud, ensuring users are who they say they are and have the appropriate level of access.

Why RSA SecurID® Access is a Cyber Catalyst-Designated Solution

Cyber Catalyst participating insurers rated RSA SecurID® Access highest on the criteria of flexibility, efficiency, cyber risk reduction, and performance.

In their evaluation, the insurers characterized it as:

- “Linchpin product in the category. The updated interface makes it more intuitive for operators.”
- “Streamlines authentication and identity governance in a unique way. Good product.”
- “What makes this product different is the simplified admin interface. Any time security is simplified, it becomes more effective as there is less chance for incorrect implementation.”
Insurance Policies and Implementation Principle

Organizations that adopt Cyber Catalyst-designated solutions may be considered for enhanced terms and conditions on individually negotiated cyber insurance policies with participating insurers.

Those insurers, when considering potential policy enhancements, will expect organizations to deploy Cyber Catalyst-designated products or services in accordance with certain “implementation principles” that have been developed by the insurers with vendors of Cyber Catalyst-designated solutions.

The implementation principle for the RSA SecurID® Access is:

- RSA SecurID Access is deployed on all external access to corporate resources (internal networks, cloud applications, and third party vendors).

Evaluation Process

Applications for evaluation of cybersecurity solutions were accepted from March 26 through May 5, 2019. More than 150 cybersecurity offerings, spanning a broad range of categories from hardware to messaging security to IoT security, were submitted for evaluation. Cyber Catalyst participating insurers evaluated eligible solutions along six criteria:

1. Reduction of cyber risk.
2. Key performance metrics.
3. Viability.
4. Efficiency.
5. Flexibility.
6. Differentiating features.

Cyber Catalyst designation was awarded to solutions receiving positive votes from at least six of the eight participating insurers, which voted independently. Neither Microsoft — which served as technical advisor — nor Marsh participated in Cyber Catalyst™ designation decisions.

The next Cyber Catalyst program is expected to open in 2020.
