

Marsh eSignature

What is Marsh eSignature?

Marsh eSignature is an electronic signature now available for our clients in order to digitally sign policies, certificates and much more related to insurance contracts.

Marsh eSignature makes sending quicker and safer via a web-based platform that notifies the client, carrier, and Marsh – speeding up the signing and delivery process.

The service incorporates a trusted third party that certifies and provides a receipt of documents sent.

It is currently being approved by the main carriers in order to provide excellent service level for the market and indeed for clients.

These agreements will allow an electronic way of signing co-insurance panels online, by providing agility, security and immediate data on the signing process and documents involved.
